

# DWA\_04.3 Knowledge Check\_DWA4

---

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

Arrays - Arrays **help maintain large sets of data under a single variable name to avoid confusion that can occur when using several variables.**

Comparison Operators & Equality - The comparison operator returns true only if the value of two operands are equal otherwise it returns false. It is also called a loose equality check as the operator performs a type conversion when comparing the elements

Comments - the purpose of **making the source code easier for humans to understand**, and are generally ignored by compilers and interpreters.

---

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

Accessors - **Your accessor doesn't actually return the value of the internal name but instead the name parameter given to it.** This is an error because accessors are meant to return (a copy of) the value held

Hoisting - Hoisting is a weird concept in Javascript. **It makes code unreadable and unpredictable.**

---
